## Refining the PEVA<sup>1</sup> for more reliable analysis

Amy L. Housley Gaffney  
Dept. of Communication

Jacquelyn J. Chini  
Dept. of Physics

**Expectancy Violation (EV)** can capture *what features* of a reformed class are most surprising to students. Such surprises may be good or bad, depending on how students interpret the violations, and may have an impact on whether students resist or endorse instructional innovations.

**Understanding EV in reformed classes should help instructors who want to frame their classes and effectively prepare their students for instruction.**

- ### Goals
1. Identify what aspects of students' expectations and experiences correlate with course satisfaction.
  2. Identify themes in PEVA items that would allow for analysis of clusters of activities rather than individual items.

At two time points, we administered a modified PEVA<sup>1</sup> to two sections of an algebra-based studio physics 1 course at EKU (N = 61)<sup>2</sup> and followed up with validation interviews (N = 4). We included a measure of course satisfaction and gathered information about class performance.

Participants were given a list of class-related activities and asked:  
"How often did you (expect/experience)<sup>3</sup> the following?" ("EV")  
"How pleased are you with the time spent doing the following?" ("Valence")

## Findings

**Course satisfaction was correlated with performance ( $p < .01$ ).**

	<i>r</i>
Exam score	0.39
Expected final grade	0.38

**Course satisfaction was correlated with the number of positive or negative EVs ( $p < .01$ ) but not with the total number of EVs.**

	<i>r</i>	mean
Total Valence	0.66	18.5
# of Neg. EVs	-0.56	2.2
# of Pos. EVs	0.57	7.6
Total EVs	<i>n.s.</i>	12.4

Students' satisfaction with the course may be tied to performance and their ultimate opinion of the amount of time they spent on various activities.

However, valence and EV are not independent, and it is still unclear how they are related. More robust results may come from examining **themes** rather than individual activities.

## Themes

We used a factor analysis of students' reported experiences (A-D, below) to begin identifying themes.

Based on the results and validation interviews, we (1) looked for patterns in EV responses to those themes, (2) honed in on the "main idea" for each theme, (3) deleted irrelevant items, (4) rephrased items that were confusing or double-barreled, and (5) checked that we had fully captured the main idea of each theme. We will administer the PEVA with the revised items in Fall 2013.

### Key

\* Item only partially loads onto this factor

Underline: Item valence predicts course satisfaction ( $p < 0.01$ )

# Significantly different from initial expectations ( $p < 0.05$ )

→ Valence *not* correlated with course satisfaction ( $p > 0.05$ )

- A**
- 3 Solve physics problems, individually
  - 12 Work on ungraded problems from worksheets
  - 13 Work on ungraded problems from the textbook
  - 14 Read the textbook

Item	Initial Expect.	Shifted Expect.	Exper.	Valence
3	5.2	4.7 <sup>#</sup>	4.3 <sup>#</sup>	0.95
12	3.9	4.3 <sup>#</sup>	4.0	0.79
13	3.6	3.5	1.4 <sup>#</sup>	-0.14
14	4.1	4.3	1.6 <sup>#</sup>	-0.17

### Individual effort

Solve problems individually during class  
Do unstructured hands-on investigations  
Practice making sense of physical concepts  
Introduce yourself to concepts before class by reading, watching videos, etc.

- B**
- 2 Discuss physics with classmates
  - 4 Solve problems, in a group
  - 10 Do "hands-on" physics activities (labs)\*
  - 16 Discuss coursework with instructors or tutors\*
  - 17 Discuss coursework with peers
  - 18 Discuss work w/peers not in the course

Item	Initial Expect.	Shifted Expect.	Exper.	Valence
2	4.3	5.4 <sup>#</sup>	4.7	1.69
4	3.9	5.4 <sup>#</sup>	4.7 <sup>#</sup>	1.64
10	4.6	5.2 <sup>#</sup>	5.4 <sup>#</sup>	1.28
16	3.8	4.4 <sup>#</sup>	3.4	0.71
17	4.1	4.8 <sup>#</sup>	4.2	1.20
18	2.2	2.5	2.2	0.41

### Interactions with classmates

Solve problems in groups during class  
Discuss physics concepts with classmates during class  
Discuss clicker responses with classmates  
Study with classmates outside of class

- C**
- 1 Pay attention to lectures
  - 7 Answer "clicker" questions
  - 9 Take graded assessments
  - 10 Do "hands-on" physics activities (labs)\*
  - 11 Complete graded homework assignments
  - 15 Review notes from class

Item	Initial Expect.	Shifted Expect.	Exper.	Valence
1	5.7	5.8	5.3 <sup>#</sup>	1.94
7	4.3	5.6 <sup>#</sup>	5.9 <sup>#</sup>	1.73
9	4.6	4.4	4.6	1.27
10	4.6	5.2 <sup>#</sup>	5.4 <sup>#</sup>	1.28
11	5.1	5.3	5.1	1.12
15	4.8	5.0	4.4 <sup>#</sup>	1.47

### Instructor-focused coursework

Instructor introducing material to the whole class  
Instructor demonstrating how to solve physics problems to the whole class  
Do structured laboratory activities  
Work on graded assignments outside of class

- D**
- 5 Ask questions of instructors
  - 6 Answer questions from instructors
  - 8 Engage in off-topic activities
  - 16 Discuss coursework with instructors or tutors\*

Item	Initial Expect.	Shifted Expect.	Exper.	Valence
5	4.2	4.6 <sup>#</sup>	3.9	0.88
6	3.7	4.4 <sup>#</sup>	3.6	0.94
8	2.1	2.4	2.4	0.77
16	3.8	4.4 <sup>#</sup>	3.4	0.71

### Personal relationship with instructors

Discuss physics concepts directly with instructors during class  
Get individual feedback from instructors  
Get encouragement and support from instructors  
Seek help from instructors outside of class

<sup>1</sup> The Pedagogical Expectancy Violation Assessment (PEVA) measures the degree of expectancy violation that students encounter in non-traditional physics courses. See Gaffney, Housley Gaffney, and Beichner, Phys. Rev. ST Phys. Educ. Res. 6, 010102 (2010) and Gaffney, Phys. Rev. ST Phys. Educ. Res. 9, 010112 (2013).

<sup>2</sup> We also administered the PEVA at UCF. Please visit our other poster, "Expectancy violation in traditional and studio-mode physics courses."

<sup>3</sup> We used two forms of expectations: initial and "shifted" (after one week of class).
